

Name of Intern: Memoona Shafiq

Project Title: Testimonials Section

Internship Program Name: Web Development Internship

Duration & Submission Date: 14th July 2025

Introduction

This project is a “Testimonials Section” for a website, showcasing client reviews in an attractive layout with profile image, quote, star rating, and navigation arrows.

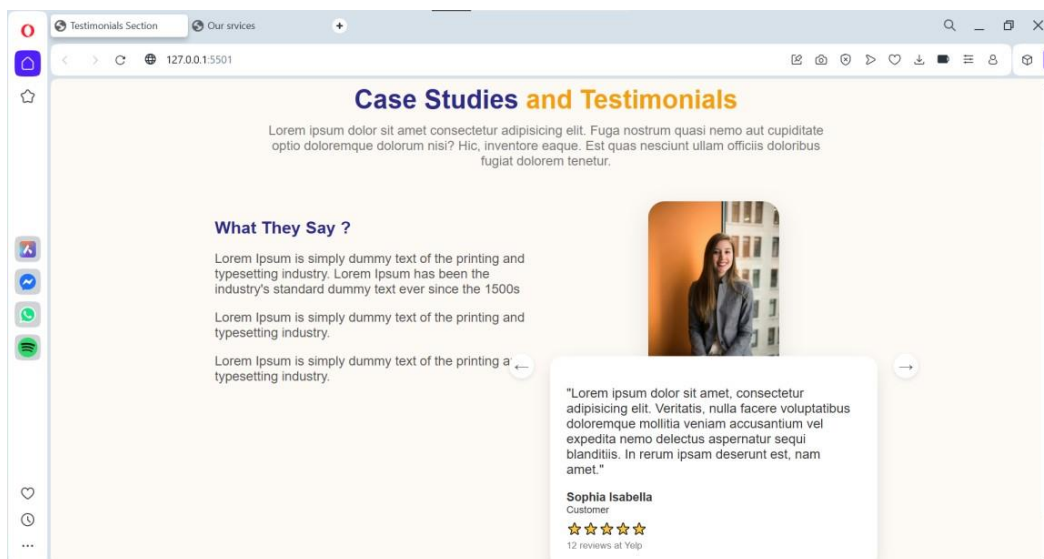

Tools & Technologies Used

- **Languages:** HTML5, CSS3
- **Frameworks:** None (Pure HTML & CSS only)
- **Hosting Platform:** Local development (can be deployed on GitHub Pages)

Features Implemented

- Bold section title using two-color headings
- Introductory paragraph □ Left side “What They Say?” text □ Right side testimonial card with:
 - Profile image
 - Arrows
 - Review box with quote
 - Star rating
 - Reviewer details

Screenshots

Development Process Step-by-step:

1. HTML file created with a section titled testimonials-section.
2. Added heading using <h2> and a paragraph for the intro.
3. Created two columns:
 - .left-text: containing paragraph content.
 - .testimonials-card: containing image, arrows, and review box.
4. CSS used for:
 - Font, spacing, color, background.
 - Flexbox to align left and right sections
 - Shadows, rounded corners, and custom star ratings
5. Image shifted slightly left using **margin-left: -30px**, and resized using **width: 40%**.

Challenges Faced

- Image placement far from text
- Image size too small or too large
- Layout breaking on different screen sizes
- Overlapping arrows with image

Learning Outcomes

- Learned how to use Flexbox to structure side-by-side content.
- Practiced positing elements with absolute positioning (arrows).
- Improved understanding of box-shadow, z-index, and layer stacking.
- Learned styling tricks like multi-color headings, button less arrows, and star symbols.

Future Improvements

- Add JavaScript to make the testimonial arrows functional (slider effect).
- Make image resize automatically with screen size (media queries).
- Add multiple testimonials with dynamic carousel/slider.
- Include animations or transitions for arrows and quote box.

Conclusion

This testimonial section enhanced my skills in creating modern UI layouts, focusing on structure, readability, and design balance. It reflects my ability to combine multiple layout strategies (flexbox, positioning, and spacing) to achieve a clean and responsive section.
